WEEKLY BAZAAR INTERACTION MAPPING

PROCESSES AND METHODS OF INTERACTION DESIGN

- **LOCATION**: “LOCAL WEEKLY MARKET NEAR RESIDENTIAL ROAD”
- **FREQUENCY**: EVERY FRIDAY
- **DURATION**: ~4–6 HOURS
- **NATURE**: TEMPORARY, INFORMAL SETUP

A POP-UP MARKETPLACE TRANSFORMING A REGULAR STREET INTO A COMMERCIAL HUB.

CONTEXT

BAZAAR OVERVIEW

MIXED VENDOR TYPES:

- FLOOR VENDORS (SITTING WITH PRODUCE)
- STANDING STALL VENDORS (TABLES/CARTS)

PRODUCTS:

- FRUITS
- VEGETABLES
- SMALL GROCERY ITEMS
- STREET FOOD
- HOUSEHOLD ITEMS
- DECORATIVE PIECES

USERS:

- LOCAL RESIDENTS (PRIMARY BUYERS)
- VENDORS FROM NEARBY AREAS

LAYOUT MAPPING

- LINEAR MARKET SPREAD ALONG ONE ROAD
- ENTRY FROM CORNER → EXIT AT T-POINT
- VENDORS PLACED ON:
- BOTH SIDES OF THE ROAD
- SOME ENCROACHING INTO CENTRAL PATH
- NO FIXED PATHWAYS OR ZONING
- MOVEMENT HAPPENS IN THE REMAINING IRREGULAR SPACE

INTERACTION MAPPING

THE BAZAAR OPERATES THROUGH LAYERED INTERACTIONS:

1. CUSTOMER ↔ VENDOR

- NEGOTIATION, PRODUCT INSPECTION, PRICE COMPARISON
- OFTEN PROLONGED → CREATES STATIC CLUSTERS

2. CUSTOMER ↔ SPACE

- NAVIGATING NARROW, SHIFTING PATHWAYS
- ADJUSTING MOVEMENT BASED ON CROWD BEHAVIOR

3. VENDOR ↔ VENDOR

- COMPETING FOR ATTENTION
- ENCROACHING SPACE TO INCREASE VISIBILITY

- **THESE OVERLAPPING INTERACTIONS CREATE CONFLICTING SPATIAL DEMANDS, RESULTING IN INEFFICIENCY.**

OBSERVATIONAL STUDY REVEALS:

- MOVEMENT IS NON-LINEAR AND UNPREDICTABLE
- USERS FREQUENTLY PAUSE MID-PATH, DISRUPTING FLOW CONTINUITY

BEHAVIORAL PATTERNS:

- “STOP–SELECT–NEGOTIATE–MOVE” LOOP
- GROUP MOVEMENT (FAMILIES) INCREASES SPACE OCCUPATION

ENVIRONMENTAL FACTORS:

- TEMPORARY LIGHTING CREATES VISUAL FOCUS ZONES, ATTRACTING CROWD CLUSTERS

RESULT:

- THE BAZAAR BEHAVES LIKE A FLUID SYSTEM WITHOUT BOUNDARIES

USER STUDY

USER PERSONAS

HOMEMAKER

- PREFERS COMPARING PRICES ACROSS VENDORS
- MOVES SLOWLY AND OCCUPIES SPACE LONGER
- EXPERIENCES FATIGUE DUE TO CROWD PRESSURE

VENDOR

- SITS AT GROUND LEVEL → REDUCED VISIBILITY
- RELIES ON VOCAL ATTRACTION (“AAO MADAM!”)
- SUFFERS FROM BEING BLOCKED BY STANDING VENDORS

QUICK BUYER

- GOAL-ORIENTED, TIME-SENSITIVE
- EXPERIENCES FRUSTRATION DUE TO:
- INTERRUPTED PATHS
- LACK OF DIRECT NAVIGATION

PROBLEMS

PROBLEM 1

CONGESTION

- THE ABSENCE OF DEFINED PATHWAYS LEADS TO BIDIRECTIONAL AND RANDOM MOVEMENT PATTERNS
- VENDORS EXTEND INTO CIRCULATION SPACE, REDUCING EFFECTIVE WIDTH
- TEMPORARY PAUSES BY CUSTOMERS CREATE CHAIN REACTIONS OF BLOCKAGE

THE SYSTEM LACKS FLOW HIERARCHY, CAUSING MOVEMENT CONFLICT.

PROBLEM 2

UNSTRUCTURED VENDOR PLACEMENT

- VENDORS OCCUPY SPACE BASED ON ARRIVAL TIMING RATHER THAN PLANNING
- FLOOR VENDORS AND ELEVATED VENDORS COMPETE WITHIN THE SAME VISUAL PLANE

LACK OF SPATIAL HIERARCHY LEADS TO VISUAL AND FUNCTIONAL IMBALANCE

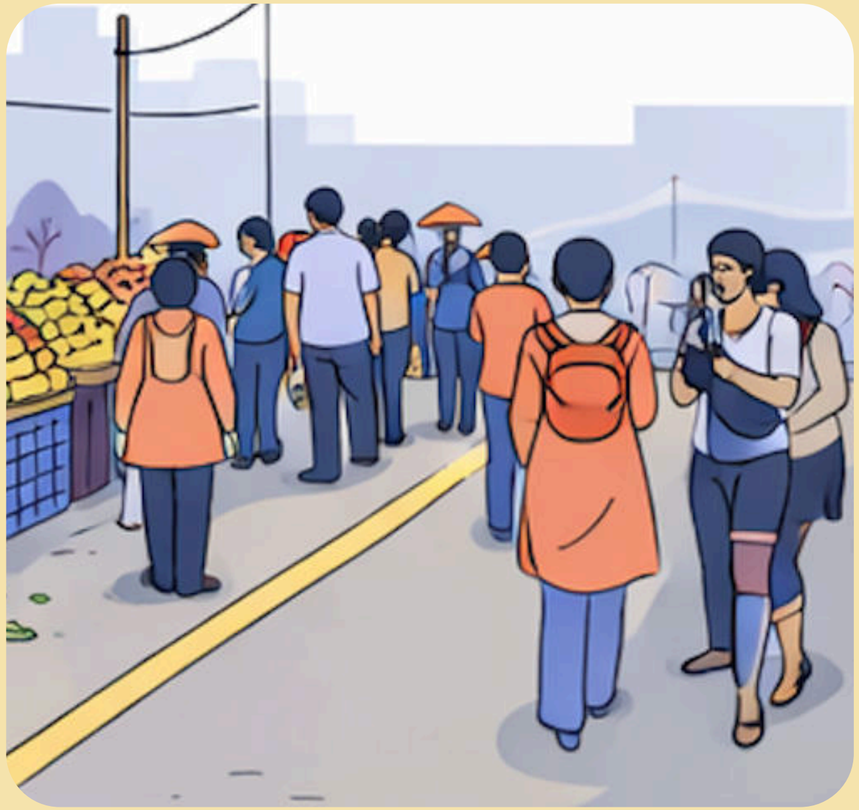

PROBLEM 3

MOVEMENT BLOCKAGE

- BROWSING AND WALKING OCCUR IN THE SAME SPATIAL ZONE
- CUSTOMERS TEND TO:
- STAND DIAGONALLY
- SPREAD OUT WHILE SELECTING PRODUCE

NO SEPARATION BETWEEN INTERACTION ZONES AND TRANSIT ZONES

PROBLEM 4

ENTRY & EXIT CHAOS

- THE MARKET BEGINS AND ENDS ABRUPTLY WITHOUT TRANSITION ZONES
- HIGH CROWD DENSITY AT:
- ENTRY CORNER (INITIAL COMPRESSION)
- T-POINT (EXIT BOTTLENECK)

LACK OF THRESHOLD DESIGN CREATES PRESSURE POINTS

PROBLEM 5

WASTE & HYGIENE

- ORGANIC WASTE ACCUMULATES NEAR VENDORS DUE TO LACK OF DISPOSAL SYSTEMS
- WASTE OFTEN SPREADS INTO WALKING PATHS

HYGIENE ISSUES NEGATIVELY IMPACT PERCEIVED QUALITY OF EXPERIENCE

PROBLEM STATEMENT

THE WEEKLY BAZAAR LACKS SPATIAL STRUCTURE AND FLOW ORGANIZATION, RESULTING IN CONGESTION, INEFFICIENT MOVEMENT, AND REDUCED USER EXPERIENCE DUE TO OVERLAPPING INTERACTION ZONES, UNREGULATED VENDOR PLACEMENT, AND ABSENCE OF SUPPORTING INFRASTRUCTURE.

SOLUTIONS

STRUCTURED LAYOUT SYSTEM

INTRODUCE A MODULAR GRID SYSTEM FOR VENDOR PLACEMENT

DEFINE:

- VENDOR BOUNDARY LINES
- WALKING CORRIDOR WIDTH

OUTCOME:

- BALANCED SPACE DISTRIBUTION
- PREDICTABLE MOVEMENT PATHS

ZONING STRATEGY

CREATE SPATIAL HIERARCHY:

- OUTER EDGE → STANDING VENDORS
- INNER EDGE → FLOOR VENDORS

GROUP SIMILAR PRODUCT CATEGORIES

OUTCOME:

- REDUCED VISUAL CLUTTER
- FASTER DECISION-MAKING FOR USERS

MOVEMENT FLOW DESIGN

INTRODUCE UNIDIRECTIONAL FLOW

USE:

- VISUAL CUES (MARKINGS, ARROWS)
- ENTRY/EXIT SIGNAGE

OUTCOME:

- REDUCED COLLISION
- SMOOTHER CIRCULATION

WASTE MANAGEMENT SYSTEM

INSTALL:

- SHARED BINS AT REGULAR INTERVALS
- VENDOR-SPECIFIC DISPOSAL UNITS

OUTCOME:

- CLEANER ENVIRONMENT
- IMPROVED USABILITY

TRANSFORMING THE BAZAAR FROM A REACTIVE SETUP INTO A SEMI-STRUCTURED SYSTEM CAN SIGNIFICANTLY ENHANCE BOTH EFFICIENCY AND USER SATISFACTION WITHOUT DISRUPTING ITS INFORMAL NATURE.

IMPACT

- REDUCED CONGESTION AND SMOOTHER FLOW
- INCREASED VENDOR VISIBILITY AND FAIRNESS
- IMPROVED HYGIENE AND COMFORT
- ENHANCED OVERALL SHOPPING EFFICIENCY

CONCLUSION

- INFORMAL MARKETS ARE COMPLEX ADAPTIVE SYSTEMS
- DESIGN INTERVENTIONS DO NOT NEED RIGIDITY, BUT STRATEGIC STRUCTURING
- EVEN MINIMAL SPATIAL PLANNING CAN CREATE HIGH-IMPACT IMPROVEMENTS IN EVERYDAY EXPERIENCES
